About Me

I am Revan Novendri, an Informatics Engineering student at Universitas Dinamika Bangsa. I possess key skills required in the IT sector, specifically the ability to adapt quickly to new technologies and a commitment to continuous learning regarding both emerging and existing technologies. Driven by a strong sense of curiosity, I enjoy exploring new concepts, keeping up with the latest technology trends, and honing my skills in programming, application development, and information systems. I aspire to join the IT industry, contribute to digital innovation, and bring forward creative ideas that help solve real-world problems in society.

Technical Skills

Programming Languages	JavaScript, C++, SQL, C#, Python
Frontend Development	HTML, CSS, Tailwind CSS, React.js, Next.js
Backend Development	Node.js, Express.js, RESTful API
Database	MySQL, MongoDB
Tools & Platforms	Git, GitHub, Docker, Postman, Arduino IDE, cPanel, XAMPP, DBeaver

Experience

PT. Berkah Auto Sukses Sejahtera (PT. BASS) *September 2025 – November 2025*

Freelance Project

- Developed a responsive corporate website using Next.js and React.js, implementing reusable components and modern frontend architecture with the App Router.
- Integrated frontend with REST APIs to dynamically display company information, product data, and contact content, reducing reliance on hardcoded data.
- Built interactive and responsive user interfaces using Tailwind CSS and Framer Motion, delivering smooth animations and an optimized user experience across devices.

PT. Media Asia Batam *April 2026 – May 2026*

Freelance Project

- Developed a responsive company profile website showcasing property, legal documentation, architecture, and construction services.
- Organized frontend code using a modular architecture with separated Controller and View layers to improve maintainability.
- Built responsive user interfaces with Tailwind CSS, ensuring consistent layouts across desktop, tablet, and mobile devices.

PT. Delapan Sisi Utama *May 2026 – June 2026*

Freelance Project

- Developed a responsive corporate website with a mobile-first approach to showcase company services, products, and business information.
- Implemented interactive animations and engaging user experiences using GSAP, AOS, and Swiper.js, enhancing navigation and visual appeal.
- Optimized frontend performance and maintainability by utilizing Vite, reusable UI components, and modern frontend development practices.

Sattafa Business *June – July 2026*

Freelance Project

- Built a 4-page bilingual (ID/EN) corporate website with Vite, Tailwind CSS v4, and vanilla JavaScript, using a client-side translation dictionary and localStorage to remember the user's language.
- Wrote a custom Vite plugin that includes shared HTML partials (navbar, footer) across all pages, removing duplicated markup.
- Replaced a third-party animation library with native IntersectionObserver to reduce dependencies.

Web Developer – (Digital Hero)
Technical submission

- I developed a news portal AI website using Next.js and React.js, focusing on performance, SEO optimization, and a modern user experience.
- I integrated three news APIs into a unified AI-driven system for intelligent content aggregation and structured presentation.
- I integrated the OpenAI API to generate missing news descriptions automatically.

INFEST XII 2026 Hackathon (Informatics Festival) | 2026
Semifinalist (Rank 17), Team Lead, Team "penghapusss"

- Led a two-person team in designing Competere, an AI-based concept for evidence-based teacher competency diagnosis under the "AI for Education Equity" sub-theme.
- Designed the system architecture (Next.js, FastAPI, scikit-learn, PostgreSQL), including an evidence fusion engine that combines assessment, video, and audio signals, and a cosine-similarity module recommender.
- Authored a 20-indicator, 5-level competency framework and produced 17 low-fidelity wireframes covering the full teacher learning flow.

Education & Organization

Dinamika Bangsa University – Informatics Engineering Study Program *2024 – Present*

UKM Robotic Unama

- Programmed an obstacle-avoiding robot using C++ and Arduino IDE.
- Developed and optimized autonomous obstacle detection and navigation systems.
- Assisted in robot assembly and hardware-software integration processes.

Youth Ranger Indonesia

- Coordinated event division activities as Vice Head of Events at Youth Ranger Indonesia.
- Led social media awareness programs for elementary school students.
- Improved team effectiveness and operational efficiency in event execution.

Certifications

Dicoding Belajar Membuat Front-End Web untuk Pemula

- Implemented DOM manipulation and Browser Object Model (BOM) concepts using JavaScript for dynamic web pages.
- Developed interactive web features by handling user events on HTML elements.
- Utilized Web Storage API (localStorage/sessionStorage) for client-side data persistence.

Dicoding Belajar Dasar Pemograman Java Script

- Mastered JavaScript fundamentals including syntax, data types, and control structures.
- Applied OOP, functional programming, modularization, and asynchronous programming concepts.
- Wrote clean, maintainable JavaScript code following best practices.

Dicoding Belajar Back-End Pemula dengan JavaScript

- Built RESTful APIs using Node.js and Hapi for backend development.
- Applied core Node.js concepts (modules, events, filesystem, streams) in application development.
- Tested and validated APIs using Postman with structured test scenarios for reliability.
